| $\mathrm{I}_{\mathrm{CC}}$ | Maximum Quiescent Supply Current | $\begin{aligned} & \mathrm{V}_{\text {IN }}=\mathrm{V}_{\mathrm{CC}} \text { or } \mathrm{GND} \\ & \mathrm{I}_{\text {OUT }}=0 \mu \mathrm{~A} \end{aligned}$ | 6.0 V |  | 8.0 | 80 | $\mu \mathrm{A}$ |

Note 4: For a power supply of $5 \mathrm{~V} \pm 10 \%$ the worst case output voltages ( $\mathrm{V}_{\mathrm{OH}}$, and $\mathrm{V}_{\mathrm{OL}}$ ) occur for HC at 4.5 V . Thus the 4.5 V values should be used when designing with this supply. Worst case $\mathrm{V}_{\mathrm{H}}$ and $\mathrm{V}_{\mathrm{IL}}$ occur at $\mathrm{V}_{\mathrm{CC}}=5.5 \mathrm{~V}$ and 4.5 V respectively. (The $\mathrm{V}_{\mathrm{IH}}$ value at 5.5 V is 3.85 V .) The worst case leakage current ( $I_{\mathrm{N}}, \mathrm{I}_{\mathrm{CC}}$, and $\mathrm{I}_{\mathrm{OZ}}$ ) occur for CMOS at the higher voltage and so the 6.0 V values should be used.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
