

STM8L-DISCOVERY

Introduction

The STM8L-DISCOVERY helps you to discover the STM8L ultralow power features and to develop and share your applications. It is based on an STM8L152C6T6 and includes an ST-Link embedded debug tool interface, LCD (24 segments, 4 commons), LEDs and push buttons.

1 Quick start

The STM8L-DISCOVERY is a low-cost and easy-to-use development kit to quickly evaluate and start a development with an STM8L ultralow power microcontroller.

Before installing and using the product, please accept the Evaluation Product License Agreement from www.st.com/stm8l-discovery.

For more information on the STM8L-DISCOVERY and for demonstration software visit www.st.com/stm8l-discovery.

1.1 Getting started

1. Check jumper positions on the board, JP1 and CN3 ON (Discovery selected).
2. Connect the STM8L-DISCOVERY board to a PC with a USB cable to power the board. Red LED LD2 (PWR) then lights up.
3. Function 1 is executed and each click on user button B2 changes the executed function as described in [Table 1](#).

Table 1. Functions

Function	LED LD3/4	Bars	Value displayed
1	Blink		STM8L V _{DD} voltage measured
2	Off		STM8L consumption measured in Run mode
3	Off		STM8L consumption measured in Low power mode, LCD on
4	Off		STM8L consumption measured in Low power mode, LCD off
5	Off		STM8L consumption measured in Halt mode, LCD off

To study or modify the DISCOVER project related to this demo, visit www.st.com/stm8l-discovery and follow the tutorial. Discover the STM8L features, download and execute programs proposed in the list of projects. This site also contains examples from which you can develop your own applications.

1.2 System requirements

- Windows PC (2000, XP, Vista)
- A/Mini-B USB cable

1.3 Development toolchain

- IAR, Embedded Workbench® for STM8
- STMicroelectronics, ST Visual Develop (STVD)

1.4 Demonstration software

Demonstration software is preloaded in the board's Flash memory. This demonstration uses the built-in IDD measurement feature of the STM8L-DISCOVERY to automatically measure and display on the LCD the consumption of the MCU in run and low power modes.

The latest versions of this demonstration source code and associated documentation can be downloaded from www.st.com/stm8l-discovery.

1.5 Order code

To order the STM8L ultralow power Discovery, use the order code STM8L-DISCOVERY.

2 Features

The STM8L-DISCOVERY offers the following features:

- STM8L152C6T6 microcontroller, 32 KB Flash, 2 KB RAM, 1 KB EEPROM in 48-pin LQFP
- On-board ST-Link with selection mode switch to use the kit as a stand-alone ST-Link (with SWIM connector for programming and debugging)
- Two red LEDs; LD1 for USB communication, LD2 for 3.3 V power on
- Designed to be powered by USB or an external supply of 5 V or 3.3 V
- Can supply target application with 5 volts and 3 volts
- Two user LEDs, LD3 and LD4 (green and blue)
- Two push buttons (User and Reset)
- I_{DD} current measurement
- LCD 28-pin DIP (24 segments, 4 commons)
- Extension header for all QFP48 I/Os for quick connection to prototyping board for easy probing

3 Hardware and layout

The STM8L-DISCOVERY is designed around the STM8L152C6T6 microcontroller in a 48-pin LQFP package.

Figure 2 illustrates the connections between the STM8L152C6T6 and its peripherals (ST-Link, push button, LED, LCD and connectors).

Figure 3 and Figure 4 help you to locate these features on the STM8L-DISCOVERY.

Figure 2. Hardware block diagram

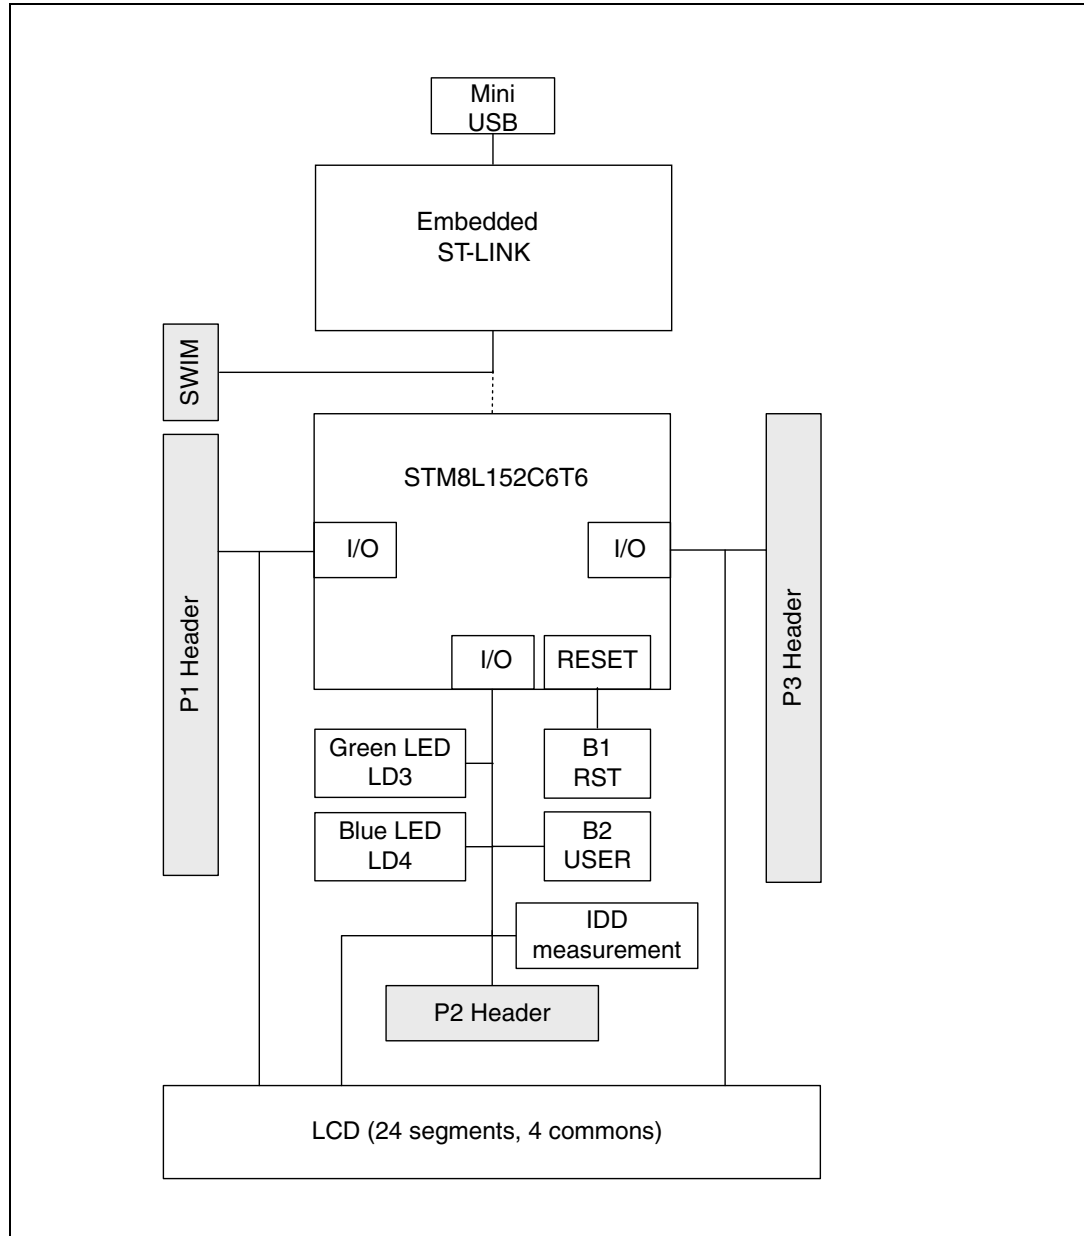

Figure 3. Top layout

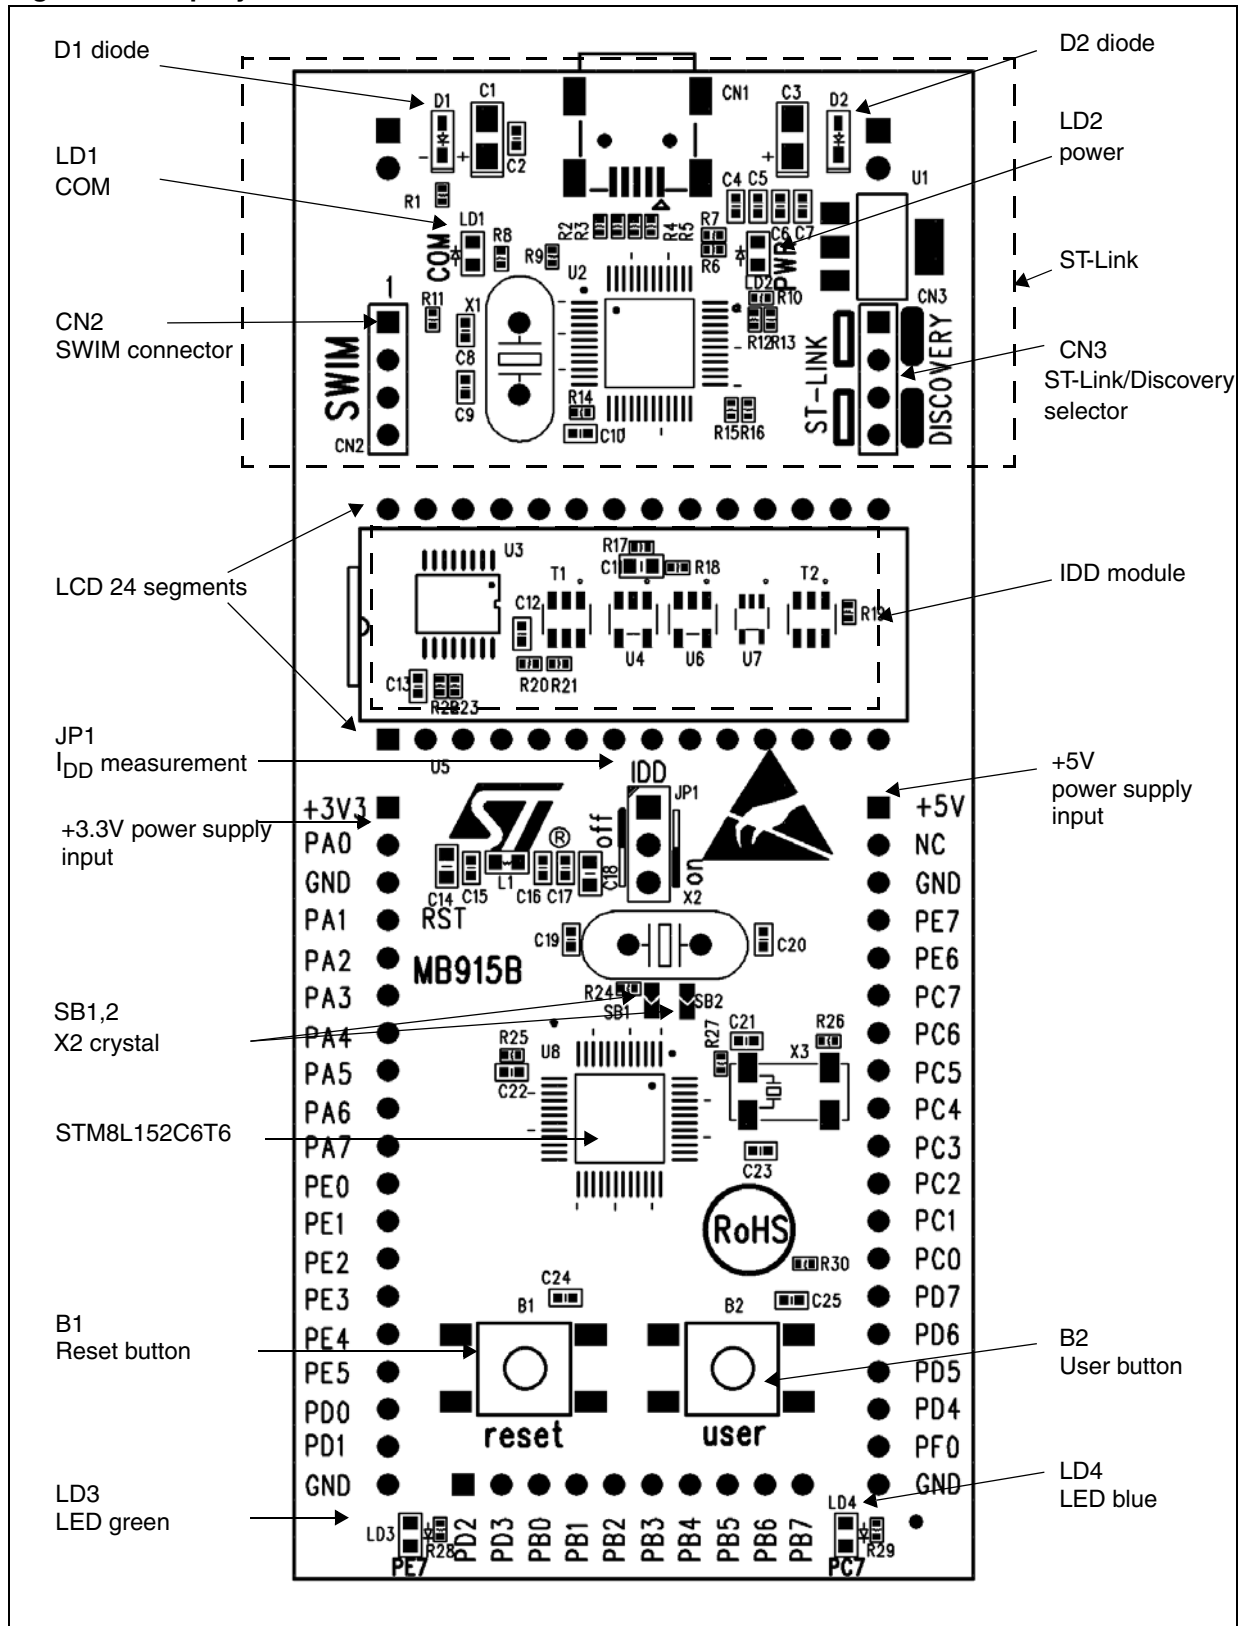

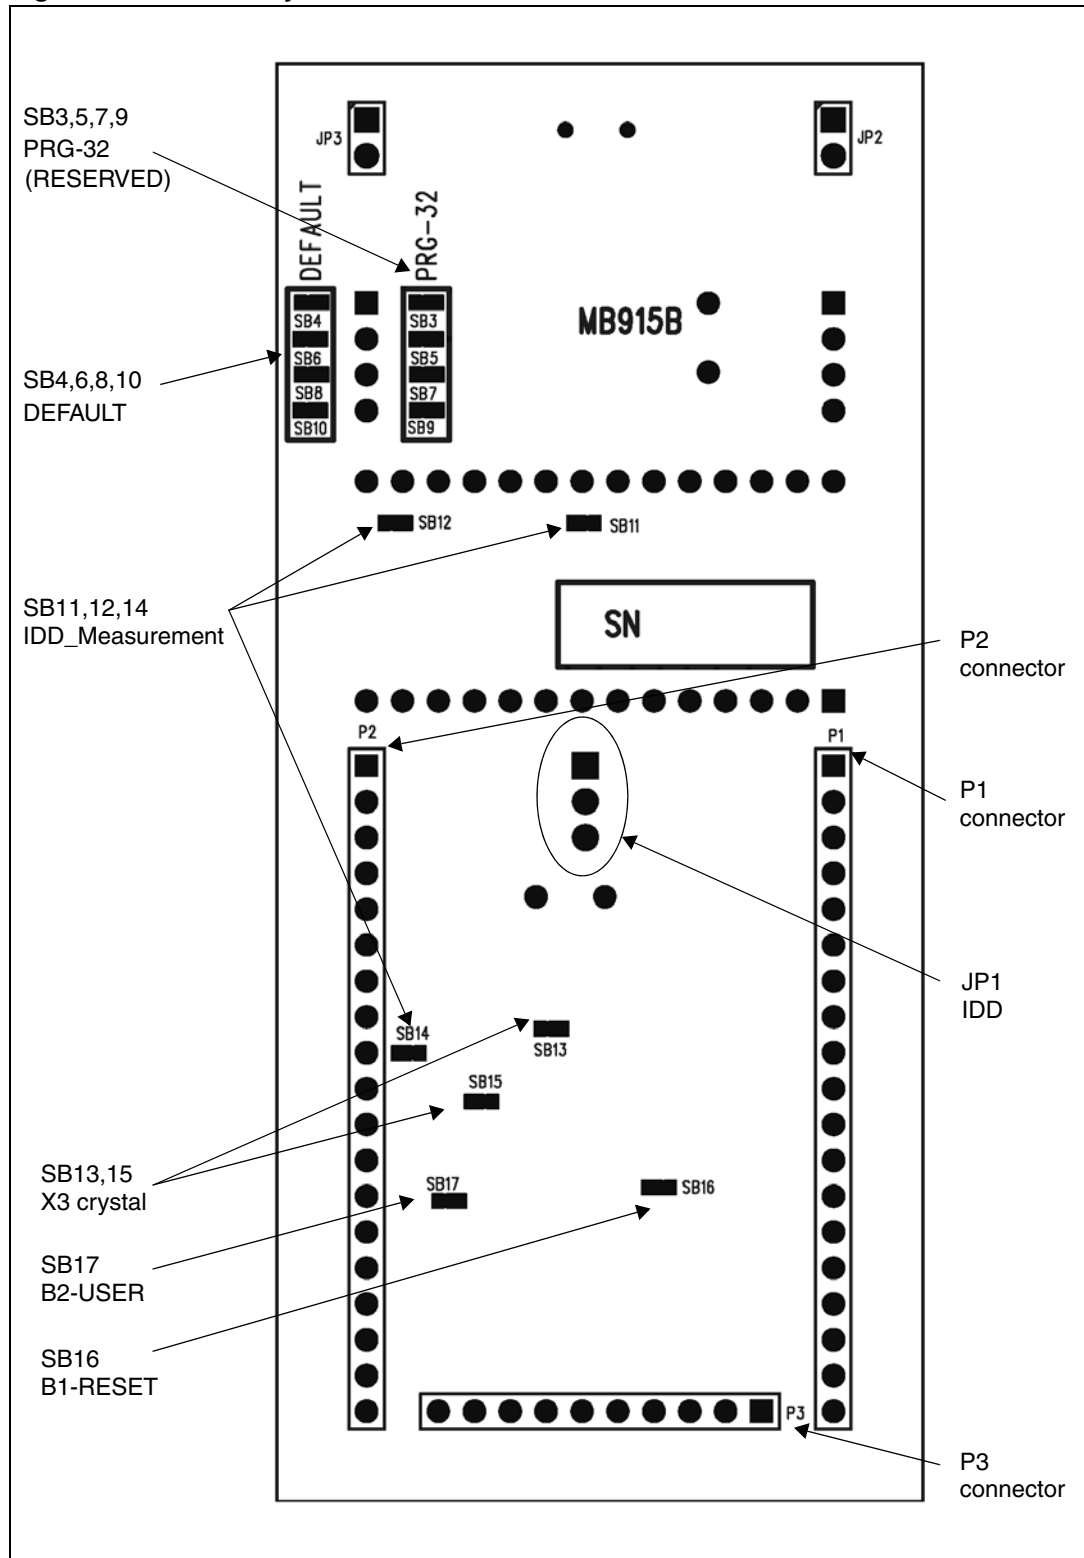

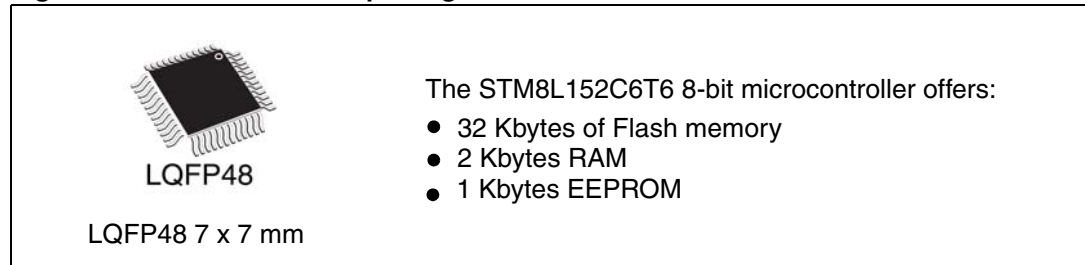

Figure 4. Bottom layout

3.1 STM8L152C6T6 microcontroller

This 8-bit ultralow power MCU has 32 KB Flash, 2 KB RAM, 1 KB data EEPROM, RTC, LCD, timers, USART, I2C, SPI, ADC, DAC and comparators.

Figure 5. STM8L152C6T6 package

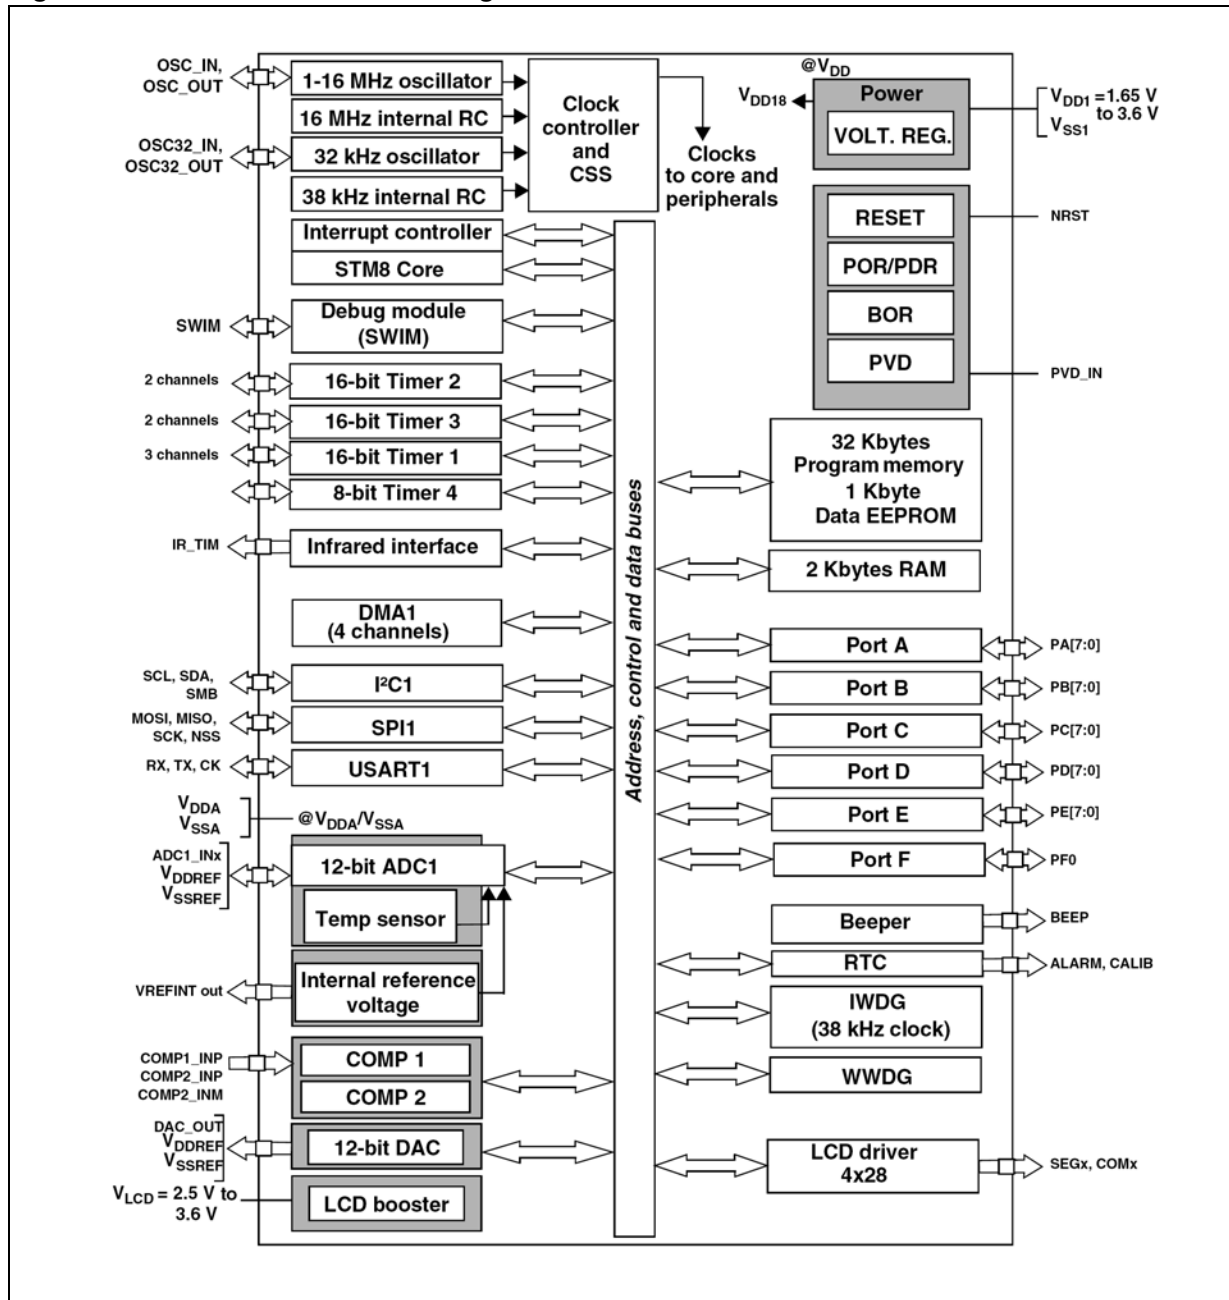

This device provides the following benefits:

- Ultralow power proprietary 130 nm technology:
Speed and power consumption independent of MCU power supply, Ultralow leakage
- Ultralow power design (clock gating, low-power Flash with power-off capability):
Reduced overall Run and Wait mode current consumption by turning off clocks of unused peripherals or Flash
- Sub 1 μ A hardware RTC and AWU system unit:
Ultralow power modes for applications requesting regular wake up
- Range of Low power modes (up to 4):
Suitable for many applications from complete switch off to continuous monitoring at ultralow frequency
- Advanced and flexible clock system (multiple internal and external clock sources):
Switch and adjust frequency and clock sources on the fly depending on application needs
- Direct memory access on board (4-channel DMA):
Autonomy for peripherals, independent from core; can switch off Flash memory and CPU (large current consumption contributors) while keeping peripherals active
- Ultralow power and ultrasafe reset system POR/PDR; additional optional activation BOR:
Integrated safety and security for application
- Ultrafast wakeup from lowest Low power mode (4 μ s):
Fast switching from Static and Dynamic power modes
- Analog functional down to 1.8 V, programming down to 1.65 V:
Full functionality over the complete V_{DD} range

For more information see the STM8L152C6T6 datasheet (Doc ID 15962) on the ST website.

Figure 6. STM8L152C6T6 block diagram

3.2 Embedded ST-Link

The ST-Link programming and debugging tool is integrated on the STM8L-DISCOVERY. The embedded ST-Link can be used in 2 different ways according to the jumper states (see [Table 2](#)):

- to program/debug the MCU on board,
- to program/debug an MCU in an external application board using a cable connected to SWIM connector CN2.

For information about debugging and programming features refer to ST-Link UM0627.

Note: UM0627 contains information about all the ST-Link features. Usage in this situation is restricted to STM8 devices and SWIM support.

Figure 7. Typical configuration

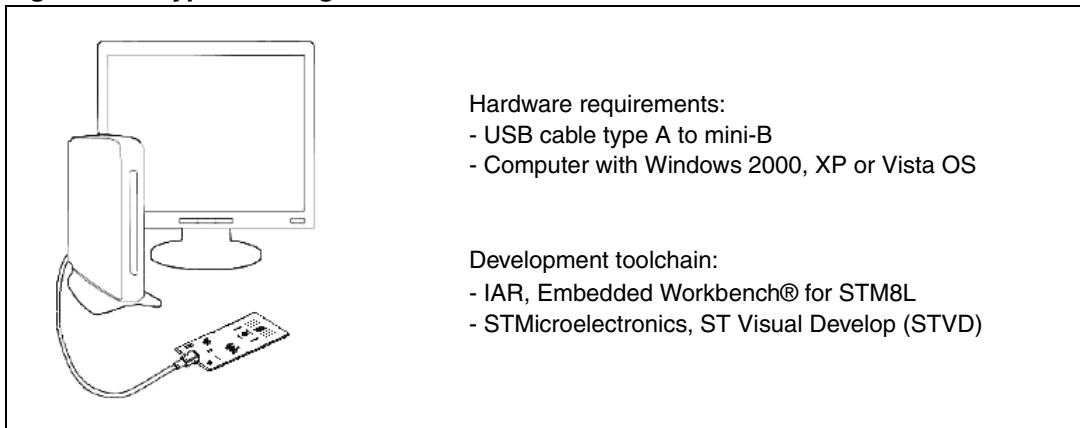

Table 2. Jumper states

Jumper state	Description
Both CN3 jumpers ON	ST-Link functions enabled for on board programming (default)
Both CN3 jumpers OFF	ST-Link functions enabled for external application through CN2 connector (SWIM supported).

3.2.1 Using the ST-Link to program/debug the STM8L on board

To program the STM8L on board, simply plug in the two jumpers on CN3, as shown in [Figure 8](#) in red, but do not use the CN2 connector as that could disturb communication with the STM8L152C6T6 of the STM8L-DISCOVERY.

Figure 8. STM8L-DISCOVERY connections image

3.2.2 Using the ST-Link to program/debug an external STM8L application

It is very easy to use the ST-Link to program the STM8L on an external application. Simply remove the 2 jumpers from CN3 as shown in [Figure 9](#), and connect your application to the CN2 debug connector according to [Table 3](#).

Table 3. Debug connector CN2 (SWIM)

Pin	CN2	Designation
1	VDD_TARGET	VDD from application
2	SWIM	SWIM data input/output
3	GND	Ground
4	SWIM_RST	SWIM reset

Figure 9. ST-Link connections image

3.3 Power supply and power selection

The power supply is provided either by the host PC through the USB cable, or by external power supply (5 V or 3.3 V). The D1 and D2 protection diodes allow the 5V and 3V3 pins to be used independently as input or output power supplies (see [Figure 3](#)). The 5V and 3V3 pins can be used as an output power supply for use by an application board connected on pin headers (P1 to P3). In such a case, the 3V3 pin provides only a 3V power supply and the power consumption must be lower than 100 mA. The 5V and 3V3 pins can also be used as an input power supply for the board when the USB connector is not connected to the PC.

3.4 LEDs

- LD1 COM: Red LED indicates communication in progress between PC and ST-Link.
- LD2 PWR: Red LED indicates that the board is powered.
- LD3 PE7: Green LED is a user LED connected to the I/O PE7 of the STM8L152C6T6.
- LD4 PC7: Blue LED is a user LED connected to the I/O PC7 of the STM8L152C6T6.

3.5 Push buttons

- B1 RST: Push button is used to RESET the STM8L152C6T6.
- B2 USER: User push button connected to the I/O PC1 of the STM8L152C6T6.

3.6 Built-in IDD measurement circuit

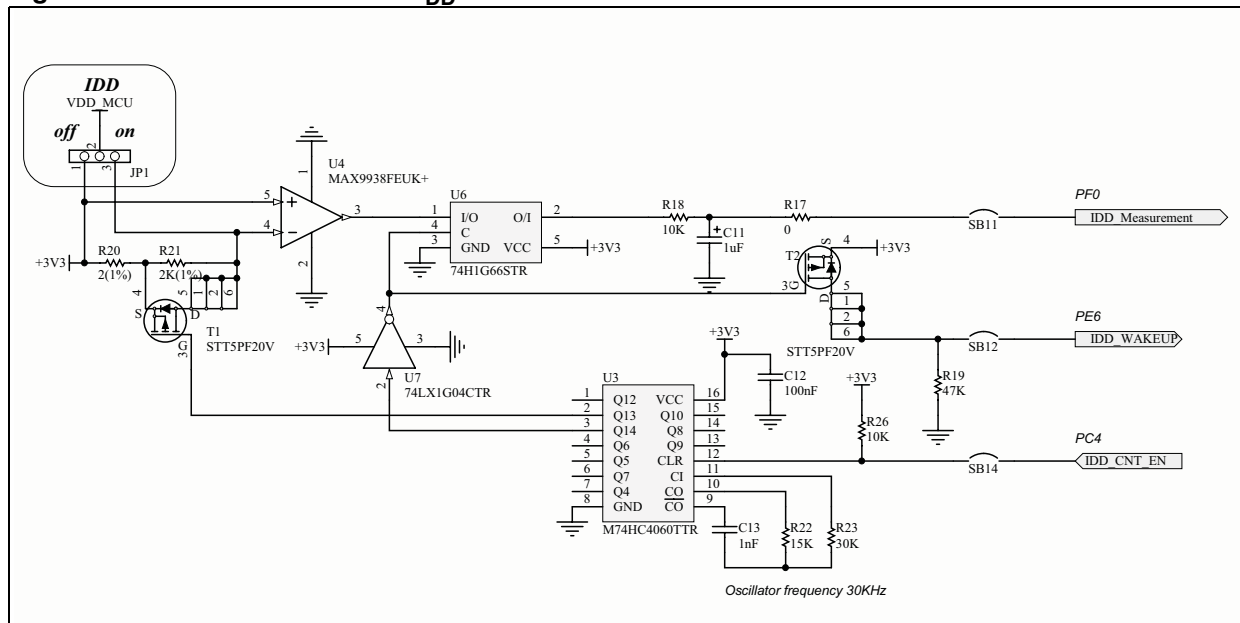

The STM8L-DISCOVERY built-in I_{DD} measurement circuit allows the consumption of the STM8L152C6T6 to be measured and displayed on the LCD Glass while the MCU is in Run or Low power saving modes.

- JP1 in ON position: STM8L152C6T6 is powered through I_{DD} measurement circuit (default).
- JP1 in OFF position: STM8L152C6T6 is powered directly by +3V3, I_{DD} measurement circuit is bypassed.

Note: When jumper JP1 is removed the current consumption of the STM8L152C6T6 can be measured by connecting an ammeter between jumper JP1 pin 1 and pin 2.

For I_{DD} measurement by the MCU itself, the circuit below is implemented on the STM8L-DISCOVERY. Solder bridges SB11, SB12 and SB14 must be closed and a jumper must be plugged between JP1 pin 2 and pin 3.

Figure 10. STM8L-DISCOVERY I_{DD} measurement circuit

3.6.1 Run mode

In Run mode, I_{DD} current is measured using the operational amplifier MAX9938FEUK+ (U4) connected to the 2Ω shunt resistor (R20). In this case IDD_CNT_EN remains high during measurement, so R21 remains in short-circuit during the measurement because of transistor T1 which remains ON permanently. The jumper JP1 must be connected between pins 2 and 3 of JP1.

3.6.2 Low power mode

In Low power modes (Halt or Active halt), the operational amplifier MAX9938FEUK+ (U4) is connected to the 2KΩ shunt resistor (R21), controlled by the analogue switch STT5PF20V (T1). In this case the counter 74HC4060 (U3) enabled by IDD_CNT_EN manages the measurement timing according to [Figure 11](#).

3.6.3 Low power mode I_{DD} measurement principle

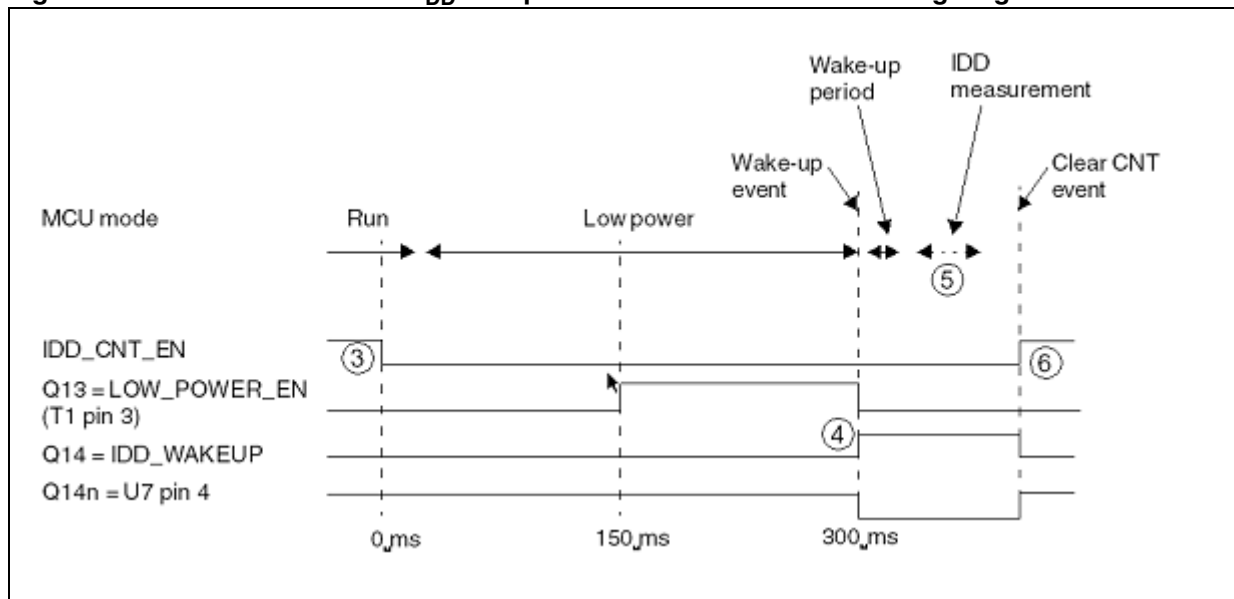

The principle used to measure a current when the STM8L152C6T6 is in Low power mode is:

1. Configure ADC to measure voltage on the IDD_Measurement pin.
2. Configure PE6 to serve as wakeup pin.
3. Enter Low power mode after setting IDD_CNT_EN (PC4) signal low.
4. IDD_WAKEUP rising edge wakes up the MCU after around 300 ms.
5. Start ADC conversion as soon as possible after wakeup in order to measure the voltage corresponding to Low power mode on capacitor C11.
6. Reset the counter by programming IDD_CNT_EN high (in less than 70 ms after the wakeup) to avoid the R21 2 KΩ resistor being connected later in Run mode.

The measurement timing is given in *Figure 11*. In Low power modes, the 2 KΩ resistor is connected when T1 goes off after entering Low power mode. Q13 output of the counter allows connection of the 2 KΩ resistor when the current I_{DD} becomes very low.

Figure 11 shows how the counter and T1 ensure that, 150 ms after IDD_CNT_EN falling edge, the shunt resistor R21 is connected between VDD_MCU and the power supply in order to reduce the measurement range to 30 uA full scale. Then after another 150 ms for current stabilization, R21 is shorted, the IDD measurement is stored in C11, and the MCU is woken up. After wakeup the MCU can measure the IDD current corresponding to the Low power mode stored in C11.

Figure 11. STM8L-DISCOVERY I_{DD} Low power mode measurement timing diagram

The Low power mode measurement procedure can be used in Halt or Active halt mode if the I_{DD} current does not exceed 30 uA, otherwise the I_{DD} measurement procedure in Run mode should be used up to 30 mA.

3.6.4 Ibias current measurement procedure

In Low power mode the bias current of operational amplifier input (U4 pin 4) is not negligible compared to I_{DD} current (typical I_{bias} is ~240 nA). To obtain a reliable STM8L152 I_{DD} measurement it is mandatory to subtract the bias current from the I_{DD} low power measurement since this current is not sunked by the MCU. I_{bias} is measured during production test and stored in the MCU EPROM. The demonstration software, Discover, uses this value to display the correct I_{DD} . The I_{bias} measurement procedure is part of the demonstration software and can be launched if required.

The procedure for I_{bias} measurement (implemented in the Demo) is:

1. Power off the board (disconnect the USB cable).
2. Set jumper JP1 to OFF position (pins 1 and 2).
3. Push down B2 (USER button), power on the board from the USB.
4. Wait at least 1 second before releasing B2, the LCD displays the I_{bias} measurement.
5. Power off the board (disconnect the USB cable).
6. Set jumper JP1 to ON position (pins 2 and 3). The I_{bias} value is now stored. The bias current is then subtracted from the I_{DD} measurement performed in Low power mode.

3.7 Solder bridges

Table 4. Solder bridge

Bridge	State ⁽¹⁾	Description
SB1,2 (X2 crystal)	Off	PA2, PA3 are disconnected from P1 X2, C19, C20 and R24 provide a clock as shown in schematics
	On	PA2, PA3 are connected to P1 (X2, C19, C20, R24 must not be fitted)
SB3,5,7,9 (DEFAULT)	On	Reserved, do not modify
SB4,6,8,10 (PRG-32)	Off	Reserved, do not modify
SB11,12,14 (IDD_Measurement)	Off	PFO, PE6, PC4 are available and IDD module cannot be used JP1 must be set to OFF
	On	PFO, PE6, PC4 are used by IDD module JP1 must be set to ON
SB13,15 (X3 crystal)	Off	PC5, PC6 are only connected to P2 (but do not remove X3, C21, C23, R27)
	On	PC5, PC6 are connected to P2. X3, C21, C23 and R27 provide 32 KHz clock
SB16 (B1-RESET)	Off	PA1/RESET signal is only connected to P1
	On	PA1/RESET signal is used by ST_LINK as SWIM_RST and also connected to P1
SB17 (B2-USER)	Off	PC1 is only connected to P2
	On	PC1 is connected to P2 and push button B2 for user

1. Default state is in **bold** type.

3.8 LCD (24 segments, 4 commons)

This LCD allows the STM8L152C6T6 to display any information on six 14-segment digits and 4 BARs, using all COMs. (See the LCD segment mapping in [Figure 12](#) and pin connections in [Table 5](#).)

Note: This LCD also supports six 8-segment digits by only using COM0 and COM1. This configuration allows COM2 and COM3 to be used as I/O ports. In this case the 2 LCD pins must not be plugged into the LCD socket. To proceed with this configuration, remove the LCD carefully, slightly open the COM2 and COM3 pins (pin 13 and pin 14) of the LCD, then replug it in the socket.

Characteristics overview:

- 24 segments and 4 commons
- Drive method: multiplexed 1/4 duty, 1/3 bias
- Operating voltage: 3 V
- Operating temperature: 0 to 50°C
- Connector: 28-pin DIL 2.54 mm pitch

Note: When the LCD is plugged, all I/O ports listed in [Table 5](#) are unavailable. To use one of these as I/O, you must remove the LCD.

4 Extension connection

Male headers P1, P2 and P3 can connect the STM8L-DISCOVERY to a standard prototyping/wrapping board. All GPI/Os of STM8L152C6T6 are available on it. P1, P2 and P3 can also be probed by an oscilloscope, logical analyzer or voltmeter.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

UNLESS EXPRESSLY APPROVED IN WRITING BY AN AUTHORIZED ST REPRESENTATIVE, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
